

The role of Participatory GIS in assessing adaptive capacity to climate change in rural Africa

Mavuto D. Tembo

PhD Candidate

Department of Geography

NUI Maynooth

My research questions

- My overall research questions are:
 - i. Do communities living in drought- and flood-prone areas have water-related knowledge that can help them adapt to climate change?
 - ii. How can PGIS help to make local knowledge relevant and usable to other actors for water management and decision-making amidst climate change?

The case study area: Makondo Parish
